P.03

Application No.: 10/767,029

Amendment After Final dated: December 22, 2006 Reply to Office Action dated: September 22, 2006

AMENDMENTS TO THE CLAIMS

(Currently Amended) A system for manufacturing a hard disk drive arm comprising: 1. a U-shaped connector to couple a relay flexible cable to a voice coil carriage assembly, said U-shaped connector including a plurality of generally parallel plates, wherein

said parallel plates include at least one bonding pad to electrically couple said relay flexible cable to a head gimbal assembly (HGA) flexure cable wherein said parallel plates include a plurality of opposing tabs.

- 2. (Cancelled).
- (Currently Amended) The system of claim [[2]]1, wherein said voice coil carriage 3. assembly has a plurality of grooves, said grooves being located on opposite sides of the voice coil carriage assembly.
- (Original) The system of claim 3, wherein said grooves are shaped and located to accept 4. said tabs.
- (Original) The system of claim 1, wherein said U-shaped connector includes at least one 5. alignment hole and said voice coil carriage assembly includes at least one alignment pin, said alignment hole shaped and located to accept said alignment pin.

Amendment After Final dated: December 22, 2006 Reply to Office Action dated: September 22, 2006

- 6. (Original) The system of claim 1, wherein said bonding pad is to be coupled to at least one connecting pad on said HGA flexure cable by a conductive bonding agent.
- 7. (Original) The system of claim 6, wherein said bonding agent includes a plurality of electrically conductive particles.
- 8. (Original) The system of claim 7, wherein said bonding agent is to be compressed between said bonding pad and said connector pad, a number of said particles to form an electrical path between said bonding pad and said connector pad.
- 9. (Original) The system of claim 8, wherein said bonding agent is Anisotropic Conductive Film (ACF).
- 10. (Original) The system of claim 1, wherein said voice coil carriage assembly is molded polymer resin.
- 11. (Original) The system of claim 1, wherein said voice coil carriage assembly is stamped aluminum.
- 12. (Original) The system of claim 1, wherein said U-shaped connector has four bonding pads and said HGA flexure cable has four connecting pads.

94336_1.DOC

Amendment After Final dated: December 22, 2006

Reply to Office Action dated: September 22, 2006

(Original) The system of claim 12, wherein said bonding pads and said connecting pads 13.

are gold coated.

14-26 (Cancelled)

27. (Original) A system for manufacturing a hard disk drive arm comprising:

a U-shaped connector to couple a relay flexible cable to a voice coil carriage assembly,

said U-shaped connector including a plurality of generally parallel plates, said parallel plates

including a plurality of opposing tabs, wherein

said voice coil carriage assembly has a plurality of grooves shaped and located to accept

said tabs; and

said parallel plates include at least one bonding pad to electrically couple said relay

flexible cable to a head gimbal assembly (HGA) flexure cable.

28. (Original) The system of claim 27, wherein said U-shaped connector includes at least one

alignment hole and said voice coil carriage assembly includes at least one alignment pin, said

alignment hole shaped and located to accept said alignment pin.

29. (Original) The system of claim 27, wherein said bonding pad is to be coupled to at least

one connecting pad on said HGA flexure cable by a conductive bonding agent.

94336_1.DOC

Amendment After Final dated: December 22, 2006 Reply to Office Action dated: September 22, 2006

- 30. (Original) The system of claim 29, wherein said bonding agent is Anisotropic Conductive Film (ACF).
- 31. (New) A system for manufacturing a hard disk drive arm comprising:
 a U-shaped connector to couple a relay flexible cable to a voice coil carriage assembly,
 said U-shaped connector including a plurality of generally parallel plates, wherein

said parallel plates include at least one bonding pad to electrically couple said relay flexible cable to a head gimbal assembly (HGA) flexure wherein said U-shaped connector includes at least one alignment hole and said voice coil carriage assembly includes at least one alignment pin, said alignment hole shaped and located to accept said alignment pin.

- 32. (New) The system of claim 31, wherein said parallel plates include a plurality of opposing tabs
- 33. (New) The system of claim 32, wherein said voice coil carriage assembly has a plurality of grooves, said grooves being located on opposite sides of the voice coil carriage assembly.
- 34. (New) The system of claim 33, wherein said grooves are shaped and located to accept said tabs.
- 35. (New) The system of claim 31, wherein said bonding pad is to be coupled to at least one 94336_1.DOC -5-

Amendment After Final dated: December 22, 2006 Reply to Office Action dated: September 22, 2006

connecting pad on said HGA flexure cable by a conductive bonding agent.

- (New) The system of claim 35, wherein said bonding agent includes a plurality of 36. electrically conductive particles.
- (New) The system of claim 36, wherein said bonding agent is to be compressed between 37. said bonding pad and said connector pad, a number of said particles to form an electrical path between said bonding pad and said connector pad.
- (New) The system of claim 37, wherein said bonding agent is Anisotropic Conductive 38. Film (ACF).
- (New) The system of claim 31, wherein said voice coil carriage assembly is molded 39. polymer resin.
- (New) The system of claim 31, wherein said voice coil carriage assembly is stamped 40. aluminum.
- (New) The system of claim 31, wherein said U-shaped connector has four bonding pads and said HGA flexure cable has four connecting pads.
